Alpha Prototype Demonstration

The goal of an alpha prototype demonstration is to assess the ability of the system to meet its functional requirements. Specifically, the alpha prototype must be able to address all the stated functional requirements. You need to develop a virtual demonstration (i.e. to the best extent possible demonstrate live rather than just have a static presentation) that shows your complete system validation and functionality.

Rubric:

Completeness of demonstration of system: 5
Connection to functional requirements: 5

When:

Week of 11/2. During team meeting times. You have a maximum of 1 hour. Each team leader must email Dr. Trimble and request a time. You only need to attend your team’s demonstration.

How:

Zoom. This is a unique year so we are learning as we go. As much of the “demo” should be “live” as possible. I’d like to be able to ask what-if scenarios and have you be able to adjust your simulation and show me the updated results.
