Project Review Description (Oral Presentation #1)

**Audience:** Engineers

**Format:** Design Review (i.e. questions during the presentation)

**Time:** 40 min (about 30 min of presentation and 10 min of questions, but the questions are mixed in so plan accordingly).

**Focus:** Where exactly are you now (e.g. what were you able to get done since the CDR) and how does that compare to where your schedule says you should be. How do you get from where you are now to done? What are your most significant achievements? What is your biggest current risk? What are the most important next tasks? Remember to frame these questions in the context of your objectives and requirements.
